

Worktwice Marketing Limited Press Release

A Force To Be Reckoned With!

Three of the country's market leaders in recycling have joined forces to provide a one stop service for the recycling of electrical/electronic office waste, The R.A.B.B.I.T.T Recycling Scheme. Worktwice Marketing Ltd, G & P Batteries Ltd and Mercury Recycling Ltd have put a scheme together for a single point collection and recycling of Toner and Inkjet cartridges, all types of batteries, fluorescent tubes, light bulbs, mobile phones and obsolete computer hardware.

What's different about this scheme?

"We have taken a valuable commodity (Toner & Inkjet Cartridges) and are using this to fund the scheme. This means that if the value of the cartridges meets the cost of the fluorescent tubes, light bulbs, batteries, mobile phones and obsolete computer equipment recycling, the service is free. If there is a shortfall however the customer will be invoiced for this, but they will still be making a saving", says Sales & Marketing Manager for Worktwice Marketing Limited, Mark Ambrose.

So with this unique scheme you are getting a service whereby from one central contact point you can arrange for Electrical/Electronic Office Waste to be recycled. Also because we are dealing with more than one item, if you need a collection and have more than one commodity to pick up, there will be a saving on the transport costs.

ISO14001

This service can contribute towards improved site housekeeping and helps to minimise health and safety risks to staff. It enables organisations of all kinds to demonstrate best environmental practice and provides a recognised audit trail for environmental management systems such as ISO14001 accreditation.
